Database Oriented

Features

Geo Starts/Stops

Arrivals and departures logged by change of motion.

Store and Forward

Logs vehicle activity when in a no coverage area. Sends info when re-enters a service coverage area.

Expanded database use

Interactive Customer, Vendor, and Landmark database.

Sleep Mode

Unit powers down with ignition off until vehicle movement or unit awakes at programmed time.

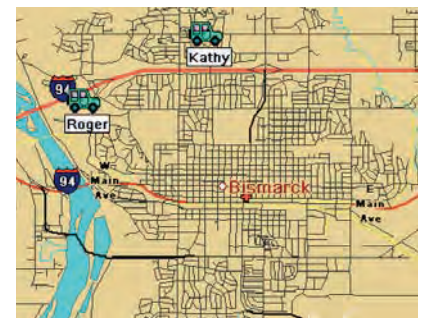

Disengage Starter

Supports relay activation for disabling starter.

Overair Option Settings

Change unit settings via page.

Geo Fencing

Store and Forward out of coverage activity.

Dispatch closest vehicle to improve response time.

Zoom in to street level on vehicles.

Get status of any vehicle's location with address.

TrakIt Nationwide

With best-in-class device footprint and electronics, TrakIt Nationwide offers wide array of hardware technology to meet diverse needs of our clients.

TrakIt TNW devices capture the lat / long or geo-locations of the targeted assets (mobile or fixed) and transmit using nationwide cellular network to our secure, global TrakIt Data Center. IDA's TrakIt Nationwide Client software technology is then deployed to exploit all the features and functionalities of our devices.

Nationwide Client

Easy to use mapping software providing nationwide tracking of your vehicles. View the last reported location of every vehicle on the digital map provided. Zoom in to street level or zoom out to see your entire fleet.

Customize your map with landmarks and customer sites. Maintain your own interactive database with the powerful point and click feature.

Asset Analytics

Our Client end software technology offers wide spectrum of reports to meet our clients' business needs. Few of the standard reports of our client-end software are as below.

- Vehicle Activity Route Report
- Multi-Vehicle Location Report
- Status Report
- Vehicle Stops Report
- Customer Stops Activity Report
- Engine Idling Report

Asset Tracking With Google Maps
